

## The future of credentialing is here

**androsCredentialing\*** has transformed the way healthcare companies credential provider networks, dramatically reducing turnaround times while complying with NCQA standards. Drawing on the data housed in 7.2 million individual and institutional provider identity graphs in the a\* platform, andros credentials healthcare providers up to ten times faster than industry standards and traditional manual workflows.

## Easy for you, easier for your providers

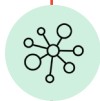

### FLEXIBLE APPLICATION PROCESS

Take the burden off your team or providers using our NCQA-compliant process. Initiate credentialing by providing CAQH data, your own provider data, or through the andros provider application. The data in the a\* platform supplements provider information from verified sources, reducing the risk of inaccurate submissions.

### AUTOMATED VERIFICATION

The a\* platform uses data-matching algorithms to automate primary source verifications, identify gaps in the required information, and flag potential roadblocks like licensing issues or sanctions. If the a\* platform can't resolve the discrepancies, professional outreach helps resolve any issues.

### ACCESSIBLE DATA

andros delivers a complete credentialing report in a single customizable PDF for both individual providers and organizations. Download the report for easy access, recordkeeping, and auditing purposes.

### SUPPORT BEYOND THE REPORT

We don't stop supporting our clients once the credentialing process ends. androsCommittee\* can manage your approval process for you, and androsMonitoring\* keeps you informed of any changes in providers' status.

**Turnaround times measured  
in days, not months**

**Automatic primary source  
verifications reduce the risk  
of human error**

**Dashboards make  
tracking progress simple  
and straightforward**
